Sound Enclosures

Sound Enclosures For Rotary Vane Vacuum Pumps, Compressors & Blowers

Becker pumps are built to be the quietest vacuum pumps and compressors available. Occasionally, pumps must be placed in an environment that mandates even lower sound levels. For those occasions, Becker offers a line of **sound reducing enclosures** that are specifically designed for our pumps to lower noise levels, while permitting the pumps to operate cool enough to ensure long-life.

Make Your Becker Pump Up To 6 Times Quieter

Sound enclosures can be found elsewhere, but no one understands the specific cooling requirements of a Becker pump better than us. Each Becker sound enclosure is light, compact, and **fits our pump like a glove**, yet provides essential cooling at just the right spots.

Benefits of using our sound enclosures:

- 10-18 dBA noise reduction
- Impact and chemical resistant
- Lightweight
- Specifically designed for Becker pumps
- Field installation on most models
